

# The Bimonthly European Industrial Pharmacists' Newsletter

JANUARY 2026

## Regulatory Affairs

### Bacteriophages and AMR, the beginning of a new era?

Bacteriophages are emerging as a promising strategy against antimicrobial resistance, with renewed research momentum and evolving EU regulations supporting their clinical adoption.

## Business & Policies

### The EU Commission adopted the rules for JCAs of medical devices and in vitro diagnostics

The EU Commission finalized rules for joint clinical assessments of medical devices and in vitro diagnostics under the EU HTA Regulation, setting procedures to harmonize evaluations across member states.

## Technology & Research

### The UK's new decentralised manufacturing framework

The UK has launched a world-first decentralised manufacturing framework, enabling medicines like cell and gene therapies to be made closer to patients via Point-of-Care and Modular Manufacturing under MHRA regulation.

## Magazine MakingLife Artificial Intelligence

In the new issue of MakingPharmaIndustry Magazine, we explore the evolution of the pharmaceutical industry: innovation, new strategies, regulatory developments and future visions for those leading the change, with insights shaping tomorrow's market and the rising impact of AI.

## Webinar

### Engaging Community Pharmacies in Clinical Research: from EU "Green Lights" to Day-One Execution

EIPG webinar with Barbara Comisso on January 26 at 17:00 CET. Focus on a practical roadmap to empower community pharmacies as operational hubs in Europe's new era of decentralized clinical research. The flyer will be issued soon.
